

PERSONAL EXPENSE ANALYTICS REPORT

Submitted By

Name: MEHA MARY SAMUVEL

Domain: Data Analytics

1. Introduction

Personal Expense Analytics is a data analytics project used to analyze personal spending habits and financial management using charts and graphs. The project helps understand monthly expenses, payment methods, savings, and category-wise spending.

2. Objective

The main objective of this project is to analyze personal expenses and visualize spending patterns using data analytics techniques. The project helps in understanding expense categories, monthly spending habits, payment method usage, and savings analysis through charts and graphs. It also helps improve financial management and decision-making.

3. Tools Used

- Python
- Pandas
- Matplotlib
- Google Colab

4. Dataset Used

A custom personal expense dataset was created in CSV format. The dataset contains:

- Date
- Expense Category
- Amount
- Payment Mode

5. Steps Performed

Step 1: Data Loading

The CSV dataset was loaded using Pandas.

Step 2: Data Cleaning

- Checked missing values
- Converted date column
- Verified dataset structure

Step 3: Data Visualization

The following charts were created:

- Expense Category Pie Chart
- Monthly Spending Graph
- Payment Mode Analysis

Step 4: Savings Analysis

Total expenses and remaining savings were calculated.

6. Charts Included

- Expense Category Distribution
- Monthly Spending Bar Graph
- Payment Mode Usage
- Savings Analysis Output

7. Observations

- Bills category has higher expenses.
- UPI is the most used payment method.
- Monthly spending analysis helps track expenses.
- Savings analysis helps improve financial planning.

8. Conclusion

The project successfully analyzed personal expenses using data visualization techniques. It helps users understand spending habits and manage finances effectively.
